

Visual Studio Install

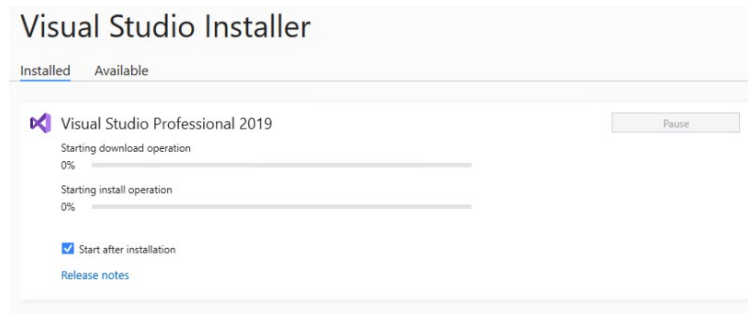

1. Open Software Center and locate the Visual Studio install package
2. Run the installation package
3. You will receive the following prompt. Click **Continue**. ***Note:** Check your task bar for a Visual Studio icon. This window may be hidden behind other open windows

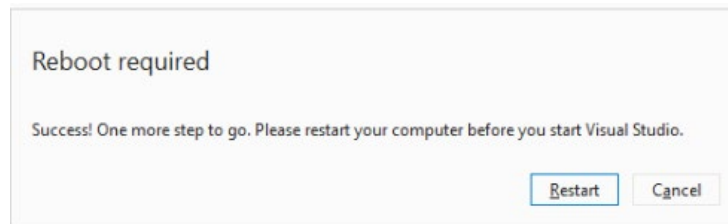

4. Bootstrap files will download and installation will begin
5. You will be presented with a menu to select the Workloads you want to include in the installation. Check the box next to the workloads and components (if applicable). You can add additional workloads after the installation if required.
6. Click **Install** on the bottom right

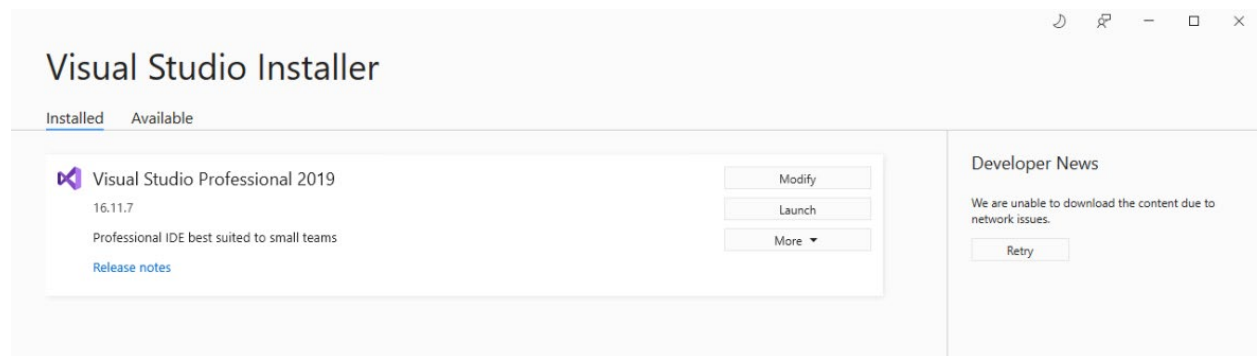

- Depending on the number of workloads and components selected, the install may take several minutes to complete.

- Reboot if prompted (some workloads may not require a reboot)

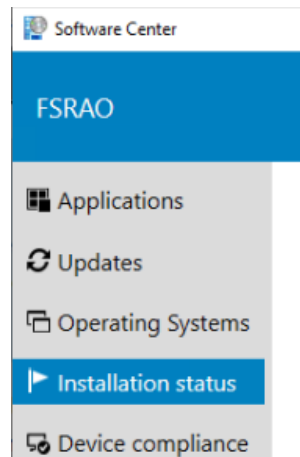

- Close the Visual Studio Installer after the installation is complete

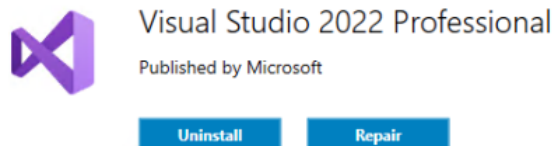

Modifying Visual Studio Installation

1. To add or remove workloads from your Visual Studio installation, open Software Center and click **Installation Status** on the right pane

2. Locate and click your Visual Studio installation.
3. Click **Repair** to re-launch the Visual Studio installer. Click **Yes** when you see the Repair application prompt

4. Click **Modify** next to your Visual Studio installation

5. Add or remove workloads and components and click **Modify** in the bottom right corner. Reboot if required.
6. After the workloads have been installed, **close the Visual Studio installer**.
